# CONCRETE HARDENER

SURFACE TREATMENT FOR POROUS CONCRETE

# CONCRETE HARDENER

## SURFACE TREATMENT FOR POROUS CONCRETE

A clear ready-to-use chemical compound which, on being applied to the floor, is absorbed into the concrete pores & reacts with the calcium salts effectively making the concrete surface denser & considerably less porous. For improving the hardness & denseness of concrete & reducing its permeability. This cuts down dusting, improved resistance to staining from oils & other spillages & provides a harder wearing surface.

### SUITABLE SURFACES

Interior & exterior concrete floors.

### FINISH

Densifies the substrate & restricts dusting; does not alter the appearance; dries transparent.

### APPLICATION

Brush-on or roll-on. Two coats are usually sufficient, but a third might be required if the concrete is very porous.

### CURING

Allow 1 day between coats.

### PACKAGING

5 & 25 litre containers.

### COVERAGE

Approximately 6m<sup>2</sup> / litre / coat; depends upon the suction & texture of the surface.

### BENEFITS

- Ready for use
- Easy to use
- UV stable
- For interior and exterior use
- Cost effective solution for permeability and 'dusting' cement-based surface
- Improves surface abrasion
