SILICONSEAL

SOLVENT-BASED

PENETRATIVE WATERPROOFING SYSTEM

SILICONSEAL SOLVENT-BASED SEALER

PENETRATIVE WATERPROOFING SYSTEM

SiliconSeal Solvent-Based Sealer greatly reduces the water absorption of concrete, clay bricks, natural stone, fibre cement & plaster. SiliconSeal Solvent-Based Sealer can also be used for the prevention of rising damp in brick walls by pumping the fluid into previously drilled holes along the course immediately above the faulty damp-proof membrane.

SUITABLE SURFACES

Concrete, cement, cement plaster, mortar, natural sandstone, clay & cement bricks & coloured cement finishes.

APPLICATION

Brush, roller or spray until surface is saturated (minimum of 2 coats wet-on-wet).

THICKNESS

Penetrative (not film forming). Penetrates the pore structure up to a depth of 6mm.

CURING

SiliconSeal Solvent-Based must be allowed to dry for a minimum of 2 days, and a maximum of 5 days, depending on the weather, to allow the solvent to fully evaporate. Application of another sealer, or decorative coating, before or after this window, will result in adhesion problems. Full cure takes place after 7 - 14 days.

PACKAGING

Available in 1, 5 & 25 litre containers.

COVERAGE

Face bricks	6m ² /litre
Porous bricks	3m ² /litre
Concrete	4m ² /litre

These figures are approximate and will vary according to the texture & porosity of the particular surface.

APPEARANCE / COLOUR(S)

A clear treatment which does not darken or change the colour of the surface to which it is applied.

Drilling holes to repair rising damp

Pouring SiliconSeal Solvent-Based Sealer into holes to repair rising damp
