SILICONSEAL SOLVENT-BASED

PENETRATIVE WATERPROOFING SYSTEM

SILICONSEAL SOLVENT-BASED SEALER

PENETRATIVE WATERPROOFING SYSTEM

SiliconSeal Solvent-Based Sealer greatly reduces the water absorption of concrete, clay bricks, natural stone, fibre cement & plaster. SiliconSeal Solvent-Based Sealer can also be used for the prevention of rising damp in brick walls by pumping the fluid into previously drilled holes along the course immediately above the faulty damp-proof membrane.

SUITABLE SURFACES

Concrete, cement plaster, mortar, natural sandstone, clay & cement bricks, gypsum plaster, asbestos, cement, terrazzo & coloured cement finishes.

APPLICATION

Brush, roller or spray; at least 2 coats wet on wet.

THICKNESS

Penetrates the pore structure to a depth of about 10mm.

CURING

SiliconSeal should be allowed to dry for at least 2 - 5 days depending on the weather to allow the solvent to fully evaporate. The best time to overcoat SiliconSeal with a sealer or paint would be between 2 - 5 days after application. Application before or after this window will result in adhesion problems. Full cure takes place after 7 - 14 days.

PACKAGING

Available in 1, 5 & 25 litre containers.

COVERAGE

Face bricks 6m²/litre

Porous bricks 3m²/litre

Concrete 4m²/litre

These figures are approximate and will vary according to the texture & porosity of the particular surface.

APPEARANCE / COLOUR(S)

An clear treatment which does not darken or change the colour of the surface to which it is applied.

Drilling holes to repair rising damp

Pouring SiliconSeal Solvent-Based Sealer into holes to repair rising damp
