TEXCRETE

FIBRE-CEMENT CASTING MIX

TEXCRETE

FIBRE-CEMENT CASTING MIX

A thixotropic, quick setting, enhanced fibre-cement blend. Mixed with a solution of FlexBond for the saturation and impregnation of CemForce to form a reinforced product that can be cast into latex or silicone moulds. Produces castings of about 4 to 8 mm in thickness.

SUITABLE SURFACES

Wood, rubber, latex, perspex or cardboard moulds

APPLICATION

Pouring into mould.

CURING

First allow work to completely dry out before immersing or wetting down with water. The longer this second wetting is carried out, the better the strengths achieved.

THICKNESS

4-8mm.

PACKAGING

20kg bags.

COVERAGE

20kg of TexCrete will cover approximately 0.75m² when applied 5mm thick.

APPEARANCE / COLOUR(S)

Available in light colours like Ivory and Straw
TexCrete can be coloured in powder form with ColourCem
Or CreteStain can be used to add colour to TexCrete once dry.

Pouring TexCrete into mould

Casted TexCrete from mould taken from basket

BENEFITS

- Moulding of lightweight small and large intricate castings where fine surface definition is required
- Can also be applied onto a layer of CemForce to create positive work, instead of casting into moulds
